

2026 EB Processing Complete

- The 2026 EB was finished a few weeks ago, where they produced an AOD along with the event weights
- I wanted to process it with EasyJet to help with offline analysis studies
 - I need DAOD for my EasyJet setup
- Tim Martin instructed me on how to submit a AOD→DAOD job to the grid for EB
- The grid job finally completed, and I ran it through EasyJet and made a few preliminary plots
- I also ran it through xAODAnaHelpers to get the trigger objects, for which ntuples completed Friday Evening
 - Haven't looked at them yet

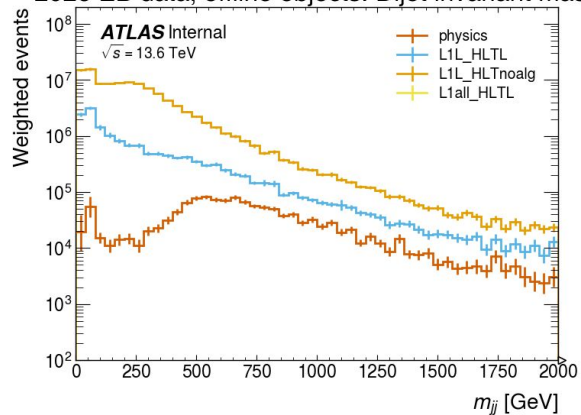

2026 EB Plots

No events passed the L1all support chain in these events, not sure if it was enabled during EB?

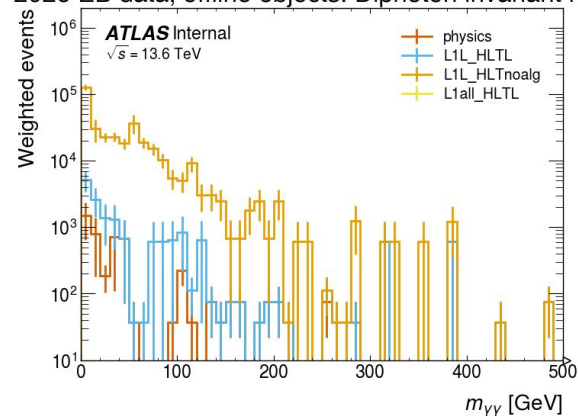

2026 EB Plots

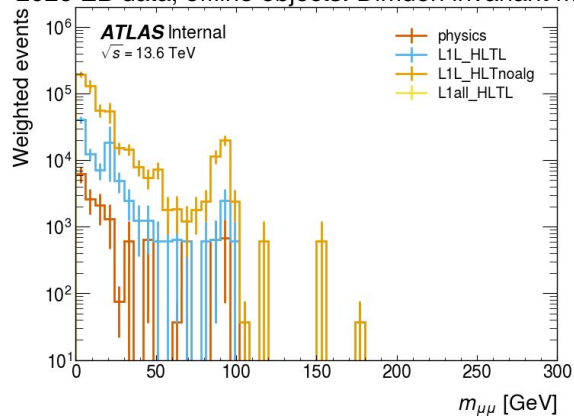

2026 EB data, offline objects: Dijet invariant mass

2026 EB data, offline objects: Diphoton invariant mass

2026 EB data, offline objects: Dimuon invariant mass

2026 EB data, offline objects: Dielectron invariant mass
