

GELATO | trigger architectures and event selection

Architectures

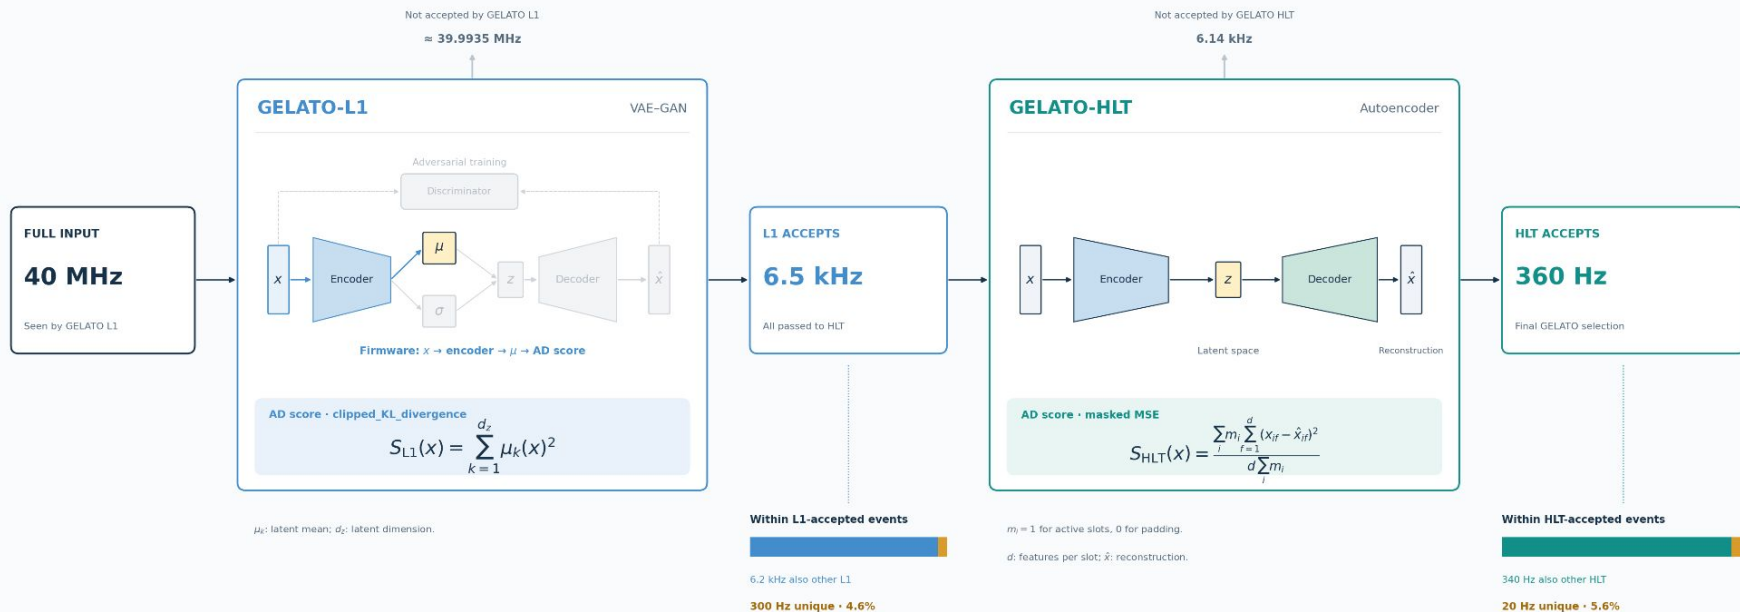

Unique = accepted by GELATO and no other ATLAS trigger at the same level. HLT-unique events may come from either L1 category.

L1: colored components form the firmware path; pale grey components are not implemented in firmware. Rates approximate; composition bars proportional within each stage.

GELATO | trigger architectures and event selection

Architectures + anomaly-score equations

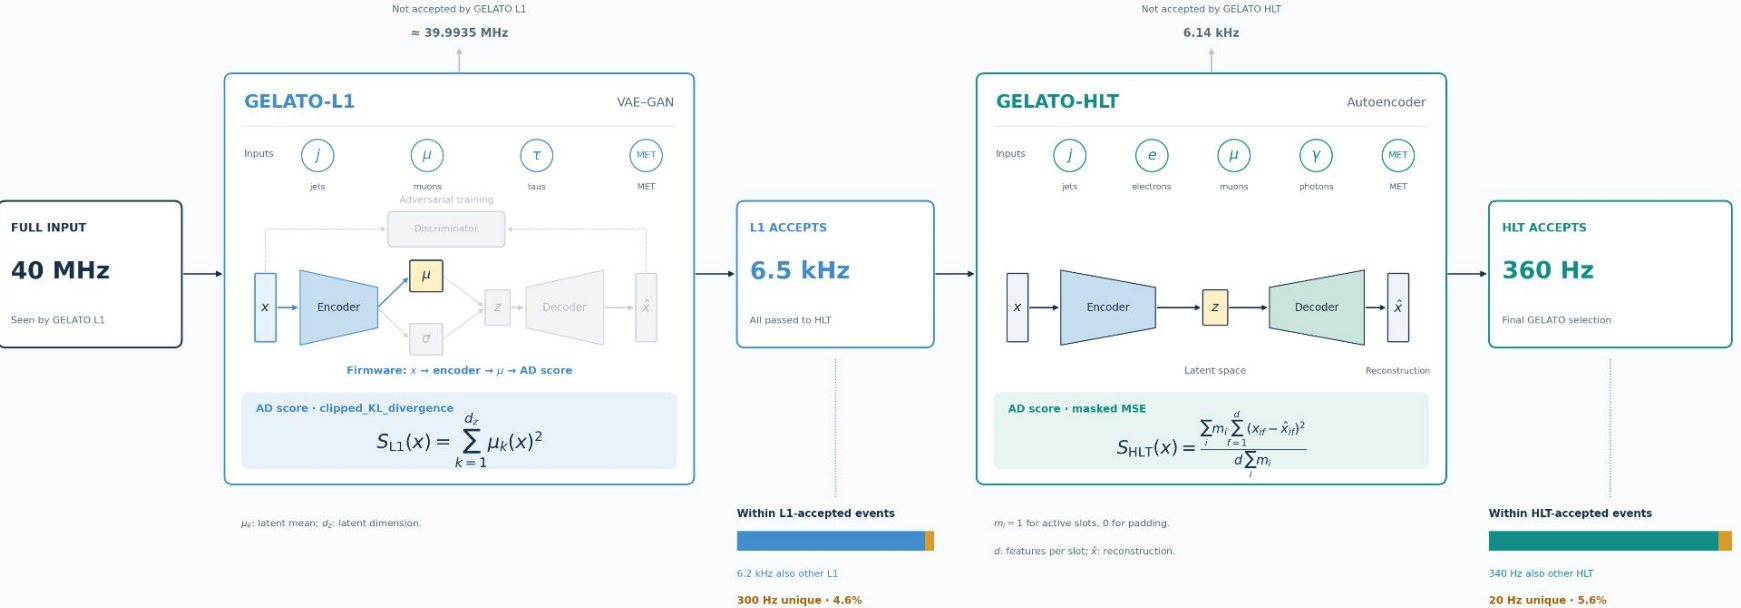

Unique = accepted by GELATO and no other ATLAS trigger at the same level. HLT-unique events may come from either L1 category.

L1: colored components form the firmware path; pale grey components are not implemented in firmware. Rates approximate; composition bars proportional within each stage.

GELATO | trigger architectures and event selection

Architectures + anomaly-score equations + input objects

Unique = accepted by GELATO and no other ATLAS trigger at the same level. HLT-unique events may come from either L1 category.

L1: colored components form the firmware path; pale grey components are not implemented in firmware. Rates approximate; composition bars proportional within each stage.
