

# Welcome!

- Thanks for coming! Here are some important details:
  - <https://indico.slac.stanford.edu/event/291/overview>
    - if you can't post material here, send it to me
  - We'll go 9am ~ 5pm PST today and tomorrow (shorter/longer if needed)
    - at SLAC we have Ballam all day/both days (thank Traci)
    - Bluejeans ID: 248 182 237 7
- Topics, Roughly: Today — Event Selection & Statistical Treatment; Tomorrow — Systematics & Documentation
- The times in the schedule are a guide and not set in stone...we'll take as long as it takes (as long as things are moving forward)

# What I expect out of this:

- After this workshop, the hope is that we have:
  - a more unified approach to ... everything ... cuts, statistical techniques (maybe), systematics
  - we have a concrete plan of what needs to be done and who's going to do it and how long it will take ... and what the priorities are
  - at very least, everyone is on the same page, knows what the plans are and (even grudgingly) agrees with them
  - a clear idea of what needs to be documented and how to present it
- The top-line goal is to get 2016 BH and vertexing results analyzed, reviewed internally, and submitted to journal
  - I think a ~6 month timeframe for this is easily achievable.

# What I expect out of you (and me):

- If you are talking, be prepared with lots of material
  - not (necessarily) a formal presentation...have the original plots handy, and code that made them...stuff like this
  - link everything to the indigo page
    - if you want that link to go back to confluence, that's fine
- If you are not talking, be an active listener
  - ask questions, take notes...at the end we will be compiling tasks lists, etc
  - that said, be constructive, no arguing!
    - sometimes a picture/slide is better than trying to explain an idea...
- If you are not talking or listening, go get us coffee.
