Neutrino Energy Reconstruction with Recurrent Neural Networks at NOvA

Tuesday, 21 July 2020 14:05 (25 minutes)

In this talk we discuss application of the recurrent neural networks to the task of energy reconstruction at the NOvA experiment. NOvA is a long-baseline accelerator based neutrino oscillation experiment that holds a leading measurement of the Δm_{32}^2 oscillation parameter. In order to achieve good estimation of the oscillation parameters it is imperative to have a good neutrino energy estimation algorithm. We have developed a new energy estimation algorithm that is based on a recurrent neural network. The new energy estimator has better performance than the previous NOvA energy estimation algorithm, and it is less affected by some of the major NOvA systematics. Using this new energy estimator has potential to significantly improve NOvA sensitivity to the oscillation parameters.
