

# 3D Imaging Dome In-air Demonstrator

3D Print Options from Stratasys

Sanha Cheong

SLAC MAGIS Group Meeting

Aug. 26<sup>th</sup>, 2021

# 3D Print Quote from Stratasys

- Aug. 20<sup>th</sup>: first submission of preliminary CAD designs
- Aug. 25<sup>th</sup>: initial quote received from Stratasys
  - Two options recommended
  - **Fused Deposition Modeling (FDM)**
    - ASA Black: UV-stable, standard thermoplastic
  - **Laser Sintering (LS)**
    - Nylon 12 CF: Carbon-fiber-filled Nylon 12
- Aug. 26<sup>th</sup>: some additional questions / requests
  - Asked few questions and additional quote
  - Price independent of build orientation
  - **Stereolithography (SLA)**
    - Somos Watershed XC 11122

# 3D Print: Fused Deposition Modeling (FDM)

- Deposits molten thermoplastic filament
  - Most basic, standard 3D printing technology
- Recommended material: ASA Black
  - UV-stable, standard thermoplastic
- Resolution of 0.007” (178μm)
- “FDM is great at maintaining a cheaper value with denser parts”

	Base	Front Board	LS Board	Object Rod	Total
FDM	\$87	\$171	\$540	\$48	\$846

## FDM

Fused Deposition Modeling

- Melts and extrudes thermoplastic filament
- Lowest price of entry and materials
- Lowest resolution and accuracy

### BEST FOR:

Basic proof-of-concept models and simple prototyping

# 3D Print: Laser Sintering (LS)

- Fuses polymer powder with laser
  - Tends to be low cost with decent resolution
- Recommended material: Nylon 12 CF
  - High stiffness, high tensile strength
  - Optimal reproduction of details
- Resolution of 0.004 - 0.006” (102 - 152 $\mu$ m)
- “SLS is better with parts that are more organic and cannot be manufactured otherwise”

## SLS Selective Laser Sintering

- Laser fuses polymer powder
- Low cost per part, high productivity, and no support structures
- Excellent mechanical properties resembling injection-molded parts

**BEST FOR:**  
Functional prototyping and end-use production

	<b>Base</b>	<b>Front Board</b>	<b>LS Board</b>	<b>Object Rod</b>	<b>Total</b>
<b>LS</b>	\$69	\$252	\$331	\$45	\$697

# 3D Print: Stereolithography (SLA)

- Laser cures photopolymer resin
  - Usually known as highest resolution/accuracy
- Recommended material: Somos Watershed XC 11122
  - Known for moisture resistance
  - Usually popular for parts where fluid flow is important
- Resolution: ??? (haven't heard back yet)

	Base	Front Board	LS Board	Object Rod	Total
<b>SLA</b>	\$115	\$126	\$599	\$82	\$922

## SLA Stereolithography

- Laser cures photopolymer resin
- Highly versatile material selection
- Highest resolution and accuracy, fine details

### BEST FOR:

Functional prototyping, patterns, molds and tooling

# Stratasys Quote Summary

- Quotes for three different 3D printing technologies
  - Fused Deposition Modeling (FDM)
  - Laser Sintering (LS)
  - Stereolithography (SLA)
- LS or SLA seem to be the best, but we should get a resolution quote for the SLA option
- Should we print our in-air demonstrator with Stratasys?
- Should we prototype with smaller piece?
- How does these prices compare with ART (SLA)?

	<b>Base</b>	<b>Front Board</b>	<b>LS Board</b>	<b>Object Rod</b>	<b>Total</b>
<b>FDM</b>	\$87	\$171	\$540	\$48	\$846
<b>LS</b>	\$69	\$252	\$331	\$45	\$697
<b>SLA</b>	\$115	\$126	\$599	\$82	\$922
