

Simulation of the multi-view imaging system with differentiable ray tracing

September 2021

Optimised Parameters

- State of the art neural-based reconstruction algorithms use COLMAP^[Schonberger and Frahm 2016] to estimate the camera parameters
- No perfect calibration and still produce decent results
- **Can we reconstruct a target object without perfect calibration?**

3d reconstruction with synthetic data

- Let us see if we can reconstruct a synthetic object without perfect calibration

3d object imaged with our simulator

3d reconstruction with synthetic data

- Let us see if we can reconstruct a synthetic object without perfect calibration
 - Code almost ready
 - Neural-based reconstruction
 - Voxel-based reconstruction
 - Can work on real data at the same time
