ILD Detector Assembly Timelines - a Reminder

Wednesday, 17 May 2023 11:10 (20 minutes)

Construction and assembly of future Higgs Factory detectors is a complex endeavour and the related time lines might be longer than anticipated. In recent years, possible assembly scenarios for the ILD detector concept at the ILC have been studied in some detail. I will summarise the results which might be interesting for other detectors at future Higgs Factories.
