High Efficiency Klystrons project at CERN: Status and u

Tuesday, 16 May 2023 15:50 (20 minutes)

Klystron is a key element of almost all particle accelerators. The High Efficiency Klystron Project at CERN is targeted to develop, fabricate and commission the new devices with improved efficiency for various particle accelerators and other applications. This activity is conducted in a close collaboration with industrial partners and scientific Labs. We will review the status and ongoing activities within HE project at CERN with emphasis given to their application in the Linear Colliders.

Presenter: SYRATCHEV, Igor (CERN)

Session Classification: Sustainability Plenary
