In Athena

- Email from Ralf Gugel:
- <https://gitlab.cern.ch/atlas/athena/-/blob/main/Trigger/TrigT1/L1Topo/L1TopoSimulation/python/L1TopoSimulationConfig.py#L164>

```
164 def L1TopoSimulationStandaloneCfg(flags, outputEDM=[], doMuons = False):
165
166     acc = ComponentAccumulator()

- Muons: L1MuCTPtoL1TopoLocationFromMuonRoI

In AOD

- data22_13p6TeV.00437548.physics_Main
.merge.AOD.f1302_m2142

- Next step: make some plots from these containers?

- Using xAOD...

- Still need another function to convert these into
toro-internal representations

- Common granularity for ET, eta, phi

- Float representations converted to integer quantities

- eFEX: function in eFEX EDM

- Muons: <https://gitlab.cern.ch/atlas/athena/-/blob/main/Trigger/TrigT1/L1Topo/L1TopoSimulation/src/MuonInputProvider.cxx#L69>

- jFEX: same as Muons
