

GELATO Update 3/8/24

Liam Sherman

FPGA Talk

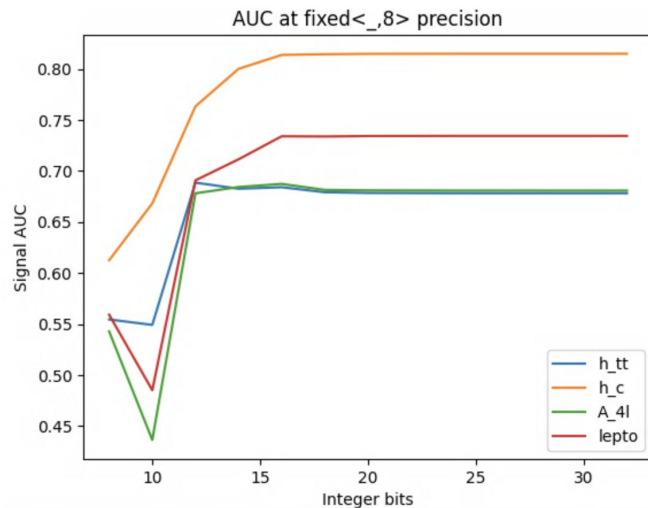

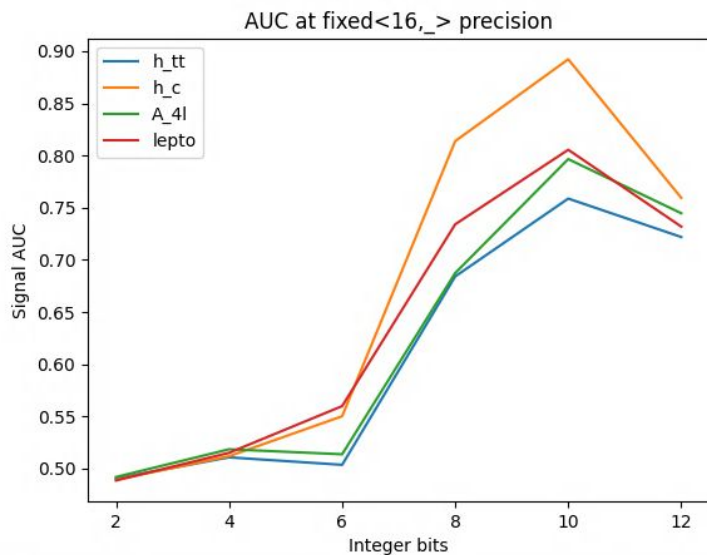

SLAC

- Presentation is now moved to Thursday March 21st (same time?)
- Slides are mostly done but I'll add in anything new I do in the next two weeks

Better Graphs of model dependence on Quantization

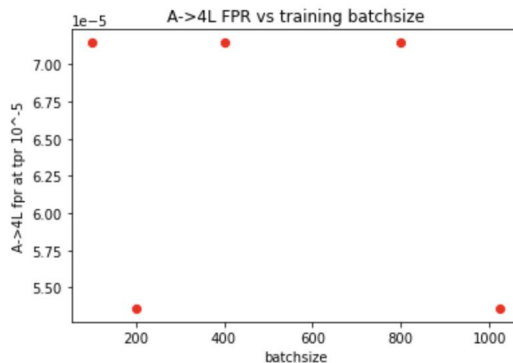

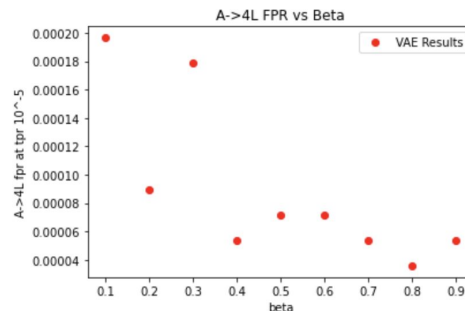

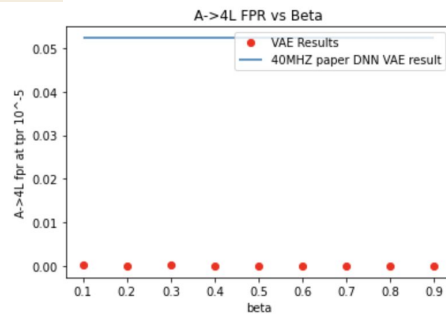

SLAC

A_4L AUC anomaly

SLAC

- The AUC anomaly for A->4L, 40MHZ paper has much higher tpr at low fpr than other signals, we don't
- Doesn't seem to be dependent on beta
- Tried to test other possible dependencies

Next Steps

- Csim and Cosim
- More hyperparameter studies for the cause of AUC anomaly
- Continuing to optimize slides
